

1 : Create a rust program which prints Hello <your name>,right now the time is <current time>

```
(John@John)-[~/my_time_app]
└─$ ls
Cargo.lock  Cargo.toml  src  target
└─(John@John)-[~/my_time_app]
└─$ cd src
└─(John@John)-[~/my_time_app/src]
└─$ ls
main.rs
└─(John@John)-[~/my_time_app/src]
└─$ cat main.rs
use chrono::Local;

fn main()
{
    let name = " Adnan ";
    let now = Local::now();
    let current_time = now.format("%H:%M:%S").to_string();
    println!("Hello {}, right now the time is {}", name, current_time);
}
└─(John@John)-[~/my_time_app/src]
└─$
└─(John@John)-[~/my_time_app/src]
└─$ cargo run
    Finished `dev` profile [unoptimized + debuginfo] target(s) in 0.06s
    Running `/home/John/my_time_app/target/debug/my_time_app`
Hello  Adnan , right now the time is 20:41:24
└─(John@John)-[~/my_time_app/src]
└─$
```

2 : Create a php file which says Hello <your name>,right now the time is <current time>

```
(John@John)-[~/my_time_app/src]
└─$ nano name.php

(John@John)-[~/my_time_app/src]
└─$ cat name.php
<?php
$name = "Adnan";

// "H:i:s" = hours (24hr),minutes,seconds
// "Y-m-d" = Year, Month, Day
$currentTime = date ("H:i:s");

echo "Hello $name, right now the time is $currentTime\n";
?>

(John@John)-[~/my_time_app/src]
└─$ php name.php
Hello Adnan, right now the time is 15:18:18
```
